

PRISM

The **universal charger** for electric mobility

Provided with a type 2 connector,
European standard, **it recharges all vehicles:**

 Full electric

 Hybrid

It is available in the following versions:

 Single-phase for systems up to 7,4kW

 Three-phase for systems up to 22kW

Recharge 100%: renewable and free

Recharge without drawing from the power network but using the excess energy produced by the photovoltaic system, without selling it to the network.

Optimized consumptions

Savings on the energy bill are guaranteed by setting the Night mode to recharge at a reduced price rate at night and on holidays.

Smart energy management

Prism adjusts the flow of energy so that it is always balanced between home consumption and car charging, avoiding the detachment of the energy meter.

Prism combines
advanced hardware and software technology.

Multiple Cluster Installations

Cluster 10

Bundles up to ten Solar RFID Prisms with no additional hardware required

OCPP Protocol

Allows communication between the charging station and the charging circuit

API

For custom development and programming of extra features

Cluster 50

Bundles up to fifty Prisms (Solar or Basic) by adding the Smart Hub
